Our Mission

Life Check Systems' mission is to provide affordable technology solutions to correctional facilities that make them safer and more secure by ensuring compliance with government regulations and organization policies.

How It Works

Life Check Systems is incredibly simple to use but brings an unparalleled level of accountability to your correctional facility.

1

Install Location Tags & Distribute Inmate IDs

Install durable NFC location tags at locations officers must visit to observe inmates and make inspections. To use the inmate tracking feature, distribute wristbands or ID cards to all inmates.

2

Create Custom Security Policies

From your private website, create custom policies, rounds, and security checks that require officers to follow your policies on inmate observations, suicide watches, inspections, etc.

3

Scan Tags and Log Observations

To execute policies, personnel must physically scan each location tag with the LCS mobile device and log observations. Officers and supervisors receive phone, text, and email alerts if any check is in danger of being missed.

All data and observations are automatically stored on the cloud and are accessible from an administrator dashboard where you can view activity in real time and generate reports.

The Features You Need for
## Improved Compliance
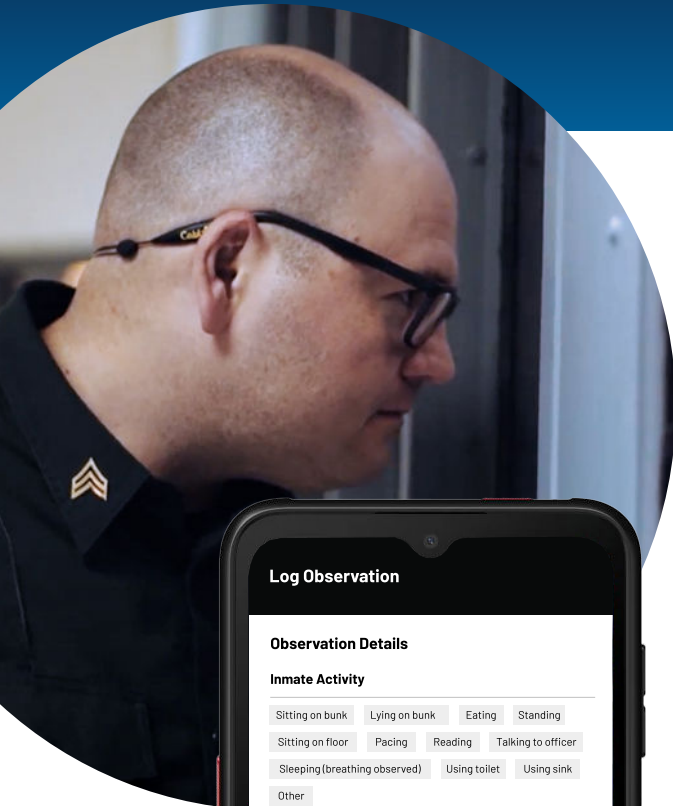

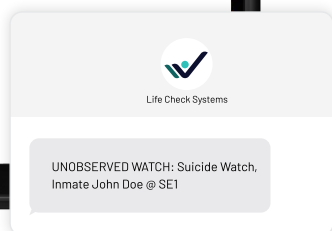

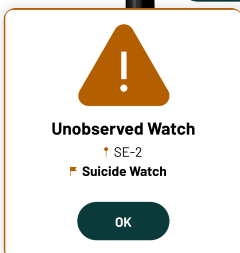

Go Paperless

With durable equipment and rapid data entry, including voice-to-text capability, Life Check enables officers to efficiently document rounds or any activities with searchable digital reports. No more paper logs.

Customizable Settings

Adapt nearly every setting in Life Check to align with your internal practices, regulations and terminology.

Never-Miss Alarms

Alarms notify officers and supervisors BEFORE a compliance failure occurs. If a compliance failure is approaching, officers receive push notifications and alarms until the check is performed. Supervisors can also receive emergency calls, texts and emails.
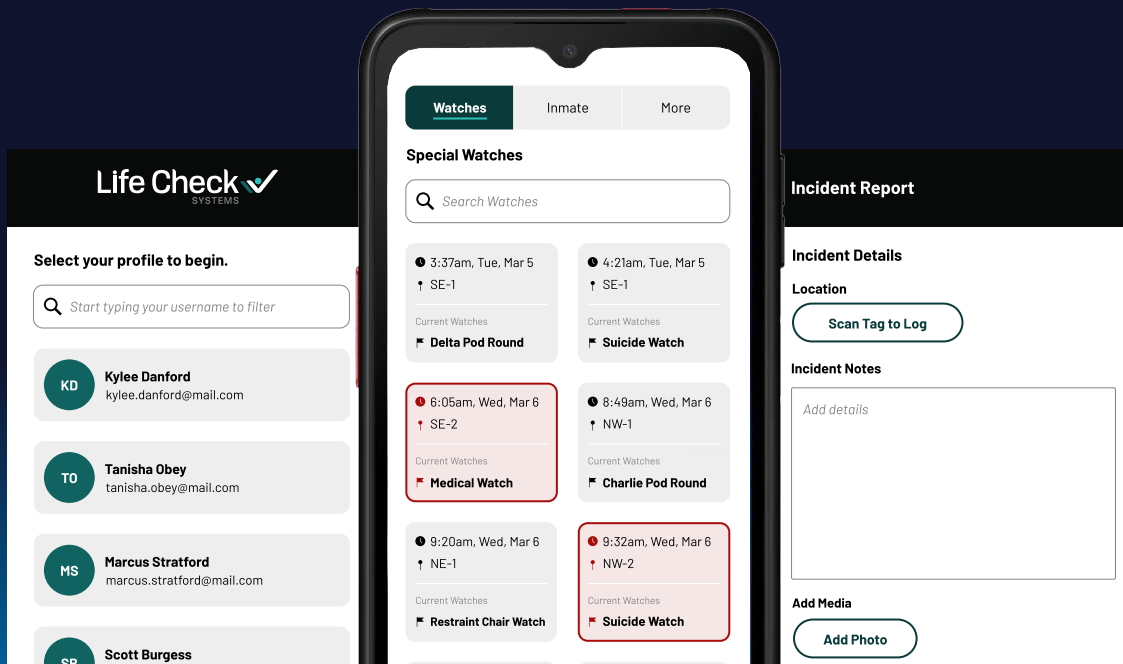

Inmate Tracking

Life Check streamlines inmate counting and tracking to reduce human error and save time. Ensure you have an individual digital record for every inmate (from book-in to release) that captures all the information you need.

Admin Dashboard

Life Check is managed from a centralized admin dashboard, where supervisors can monitor activity in real-time from a single screen, as well as generate custom reports for inspectors, easily providing them with the exact information they need.

Body Camera

Every Life Check mobile device is also an on-demand body camera with the push of a dedicated button on the side of the device. Protect your officers with the power to instantly create video records in any situation.
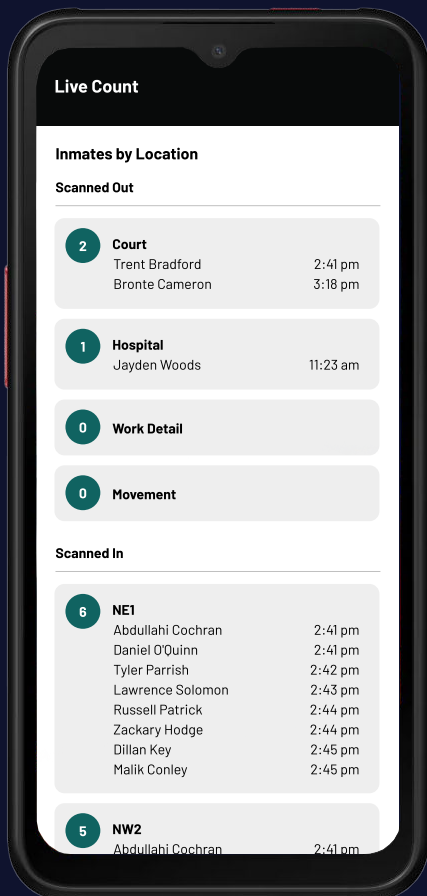

JMS Integration

Connect to your jail management system so it automatically populates in your LCS website. LCS is happy to integrate with any JMS system free of charge.

Real-Time Inspection Logs & Reports

Replace unreliable paper forms with automated digital reports.
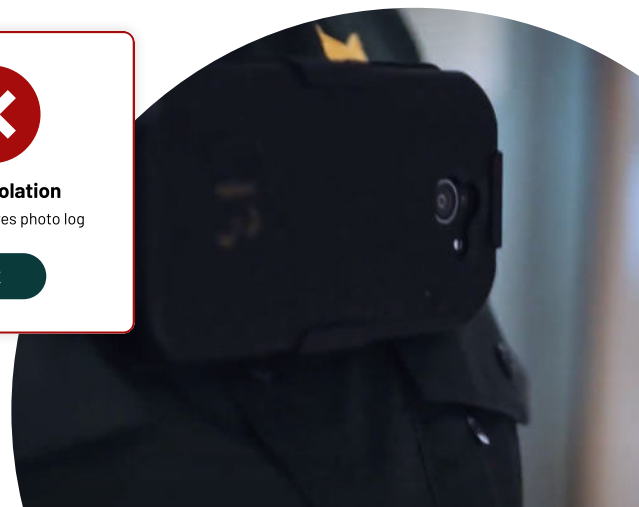

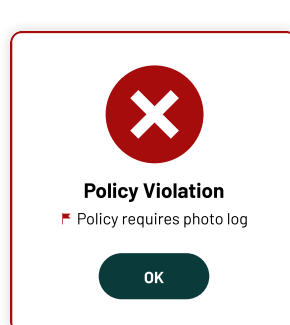

Achieve Compliance with Critical Regulations

Life Check Systems makes it easier than ever for your correctional facility to stay compliant with government regulations requiring documented, personal observations and inmate counts.

Never Miss a Required Observation

✓ Customizable Alarm Settings
Management can individually customize their alarm settings for every watch, tour, or round.

✓ Push Notifications
Officers conducting watches receive visual push notifications on their device informing them of anything behind schedule.

✓ Graduated Alarms
Devices sound an audible alert that gradually increases in intensity until the check is made.

✓ Emergency Alerts to Supervisors
If the observation still has not been made, the system will call, text, and email supervisors and management to let them know immediately.

✓ Live Count
Management can always see a current and accurate list of each inmate's location.

✓ Real-Time Monitoring
All events with Life Check Systems upload in real-time, so administrators can monitor activity from any computer or smartphone while on or off site.

Reduce Risk and Liability

With paper forms, inmate safety checks are often missed and records are easily falsified. It's a serious liability threat for correctional facilities. Life Check replaces paper forms with self-verified digital reports that prove your compliance and dramatically lower your risk exposure.

Ensure Physical Presence
Officers must sign in with their unique PIN and physically touch the mobile device to the NFC tag with every observation, preventing falsified reporting.

Confirm Identity
When officers scan inmate wristbands, the device will display the inmate's photo to confirm identity.

Require Photos and Videos
Enable photo and video capture for visual confirmation of inmate safety.

Customize Data Entry
Require officers to answer customized questions during checks, and provide prompts for quick entry.

Digital Inspection Logs
Digital inspection logs are automatically generated and stored on the cloud. Export reports with all observation data, including photos, videos, timestamps and officer information. Run inmate count reports and search reports to see all of an inmate's movement within a facility.
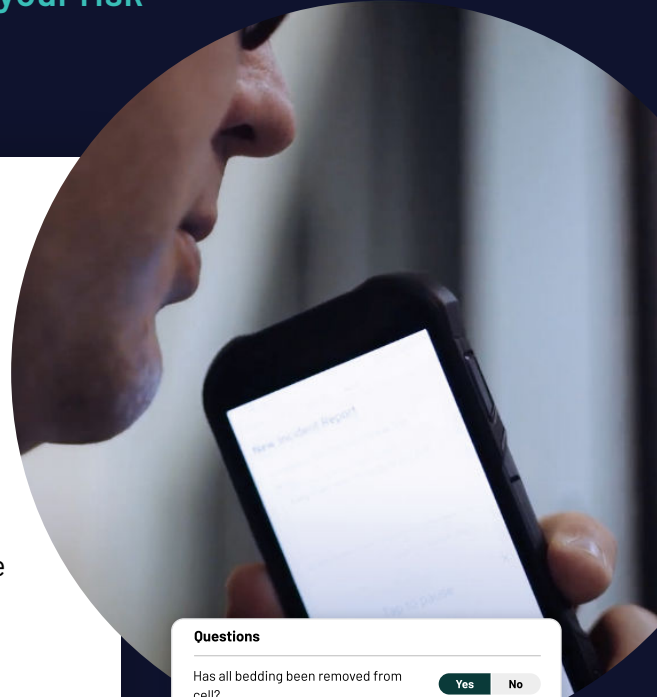

Questions

Has all bedding been removed from cell? — Yes / No

Has all clothing been removed? — Yes / No

Has inmate been examined by medical personnel? — Yes / No

Why has inmate been placed in restraint chair?
